INFO-F403 Introduction to Language Theory and Compilation

Chapeaux Thomas Dagnely Pierre

 $March\ 5,\ 2013$

1 Lexèmes

Définition des tokens

	•
Lexical units	regular expressions
INT	([0-9])*
FLOAT	([0-9])*.DOT.([0-9])*
BOOL	(0+1+true+false+")
STRING	'.([A-Za-z]+[0-9])*.'
FAC	!
MUL	*
DIV	/
MINUS	-
ADD	+
LT	+ < >
GT	>
LE	<=
GE	>=
EQUIV	==
DIF	!=
AND	&&
OR	
NOT	not
LT-S	lt
GT-S	gt
LE-S	le
GE-S	ge
EQ-S	eq
NE-S	ne

Lexical units	regular expressions
EQUAL	=
DOT	
SEMICOLON	;
COMA	,
OPEN-PAR	(
CLOSE-PAR)
OPEN-BRAC	{
CLOSE-BRAC	}
OPEN-COND	IF
CLOSE-COND	ELSE
ADD-COND	ELSE IF
NEG-COND	UNLESS
RET	return
FUNCT-DEF	SUB
ID	STRING
FUNCT-CALL	&.STRING
PERL-DEF	defined
PERL-INT	int
PERL-LENG	length
PERL-SCAL	scalar
PERL-SUBS	substr
PERL-PRIN	print
COMM	#.STRING
VARIABLE	\$.STRING

coma peut définir l'opérateur coma ou juste un coma entre deux param, mais même lexical unit, c'est le parser qui se charge du reste

COMM ne sera plus utilisé par la suite, on les supprime avant de faire l'analyse lexicale

2 Automates

Définition des automates finis

DFA

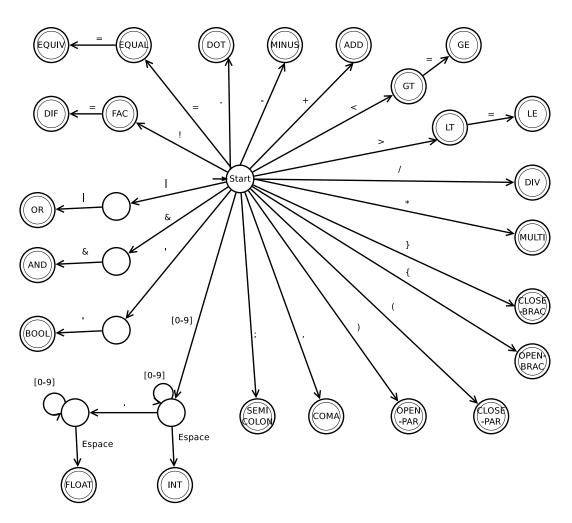

Figure 1: automate "non alphabétique"

La plupart des noeuds pointent vers le token ID, trop lourd a représenter, donc met une petite fleche bleu à la place.

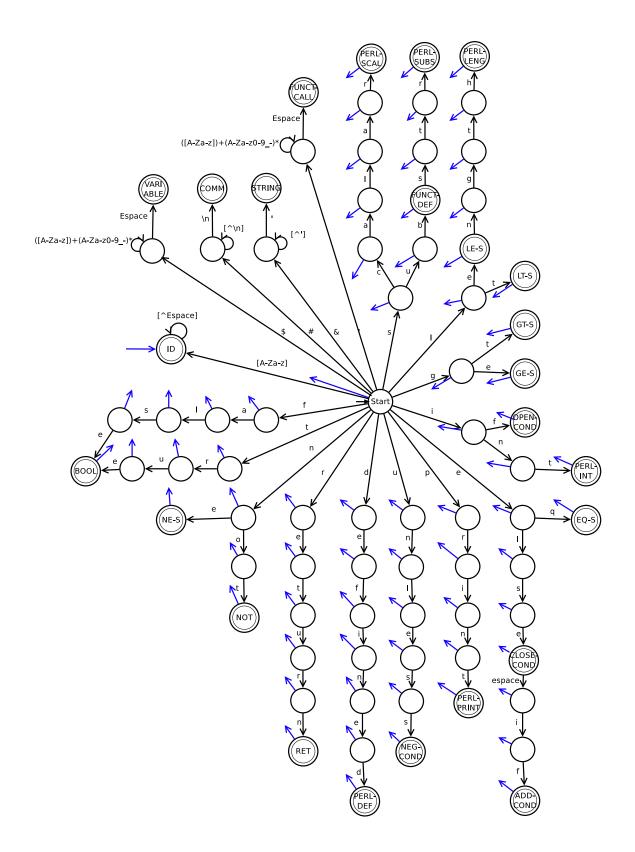

Figure 2: automațe "alphabétique" $% \left(1\right) =\left(1\right) \left(1\right$

3 Gramaires

3.1 Définition de la grammaire

On se base sur la BNF donné par l'assistant et on l'adapte à notre version de perl

PROGRAM

- \rightarrow PROGRAM FUNCT-LIST
- \rightarrow PROGRAM INSTRUCT
- \rightarrow FUNCT-LIST
- $\rightarrow \text{INSTRUCT}$
- \rightarrow EPSILON \rightarrow FUNCT

FUNCT-LIST

- \rightarrow FUNCT FUNCT-LIST
- \rightarrow EPSILON

 $\begin{array}{ccc} & \rightarrow & \\ & & \rightarrow \\ & & & \end{array}$

- → FUNCT-DEF ID OPEN-BRAC INSTRUCT RETURN CLOSE-BRAC
- \rightarrow FUNCT-DEF ID OPEN-PAR CLOSE-PAR OPEN-BRAC INSTRUCT RETURN CLOSE-BRAC
- → FUNCT-DEF ID OPEN-PAR PARAM CLOSE-PAR OPEN-BRAC INSTRUCT RETURN CLOSE-BRAC

FUNCT-CALL

- \rightarrow USER-FUNCT-CALL
- $\rightarrow \text{PERL-FUNCT-CALL}$

USER-FUNCT-CALL

- \rightarrow ID OPEN-PAR CLOSE-PAR
- \rightarrow ID OPEN-PAR PARAM CLOSE-PAR
- \rightarrow ID PARAM
- \rightarrow ID

PERL-FUNCT-CALL

- \rightarrow PERL-DEF EXP
- \rightarrow PERL-INT EXP
- \rightarrow PERL-LENG EXP
- \rightarrow PERL-SCAL EXP

                         \rightarrow EXP OPERATOR-COMP EXP
                        \rightarrow MUL
        OPERATOR
                          \to {\rm DIV}
                          \rightarrow MINUS
                          \rightarrow CONC
                          \rightarrow ADD
                          \rightarrow COMA
                          \rightarrow DOT
OPERATOR-COMP
                         \rightarrow LT
                          \rightarrow GT
                          \rightarrow LE
                          \rightarrow GE
                          \rightarrow EQUIV
                          \rightarrow DIF
                          \rightarrow AND-LOGIC
                          \rightarrow OR
                          \rightarrow LT-S
                          \rightarrow GT-S
                          \rightarrow LE-S
                          \rightarrow GE-S
                          \rightarrow COMA-LOGIC
                          \rightarrow \text{EQ-S}
                          \rightarrow NE-S
              VALUE \rightarrow INT
                          \rightarrow {\rm FLOAT}
                          \to \mathrm{BOOL}
                                                                        6
                          \rightarrow {\rm STRING}
                 VAR \rightarrow VALUE
                          \rightarrow VARIABLE
                          \rightarrow MINUS VAR
                          \rightarrow ADD VAR
                          \rightarrow OPEN-PAR EXP CLOSE-PAR
```

3.2 Gestion des priorités

On doit adapter la grammaire pour respecter les priorité et les associativité gauche/droite.

Cela ne modifie que les règles EXP, EXP-COND, OPERATOR et OPERATOR-COND qui deviennent :

```
\rightarrow <EXP> LT <EXP2>
 \langle EXP \rangle
              \rightarrow <EXP> LT-S <EXP2>
              \rightarrow <EXP> GT <EXP2>
              \rightarrow <EXP> GT-S <EXP2>
              \rightarrow <EXP> LE <EXP2>
              \rightarrow <EXP> LE-S <EXP2>
              \rightarrow <EXP> GE <EXP2>
              \rightarrow <EXP> GE-S <EXP2>
              \rightarrow <EXP> EQUIV <EXP2>
              \rightarrow <EXP> EQ-S <EXP2>
              \rightarrow <EXP> NE-S <EXP2>
              \rightarrow <EXP> DIF <EXP2>
              \rightarrow <EXP> DOT <EXP2>
              \rightarrow <EXP> COMA <EXP2>
              \rightarrow <\!\!\text{EXP2}\!\!> \text{EQUAL} <\!\!\text{EXP}\!\!>
              \rightarrow NOT <EXP>
              \rightarrow FAC \langleEXP\rangle
              \rightarrow <EXP2>
\langle EXP2 \rangle
              \rightarrow <EXP> ADD <EXP3>
              \rightarrow <EXP> MINUS <EXP3>
              \rightarrow <EXP> OR <EXP3>
              \rightarrow <EXP3>
\langle EXP3 \rangle
              \rightarrow <EXP> MUL <VAR>
              \rightarrow <EXP> DIV <VAR>
              \rightarrow <EXP> AND <VAR>
              \rightarrow <VAR>
```

3.3 Suppression des symboles inutiles

On doit virer non-productifs et inaccessibles. Ici ok, rien à faire

3.4 left-factoring

On vire ce qui commence pareillement

On obtient la gram suivante :

 $PROGRAM \rightarrow PROGRAM \ PROG-END$

 $\rightarrow \text{FUNCT-LIST}$

 $\to {\rm INSTRUCT}$

 $\rightarrow \text{EPSILON}$

 $\begin{array}{ccc} \mathsf{PROG\text{-}END} & \to \mathsf{FUNCT\text{-}LIST} \end{array}$

 \rightarrow INSTRUCT
