# INFO-F403 Introduction to Language Theory and Compilation

Chapeaux Thomas Dagnely Pierre

 $March\ 6,\ 2013$ 

# Lexèmes

#### Définition des tokens

Lexical units	regular expressions
INT	([0-9])*
FLOAT	([0-9])*.DOT.([0-9])*
BOOL	(0+1+true+false+")
STRING	'.([A-Za-z]+[0-9])*.'
FAC	!
MUL	*
DIV	/
MINUS	-
ADD	+
LT	<
GT	>
LE	<=
GE	>=
EQUIV	==
DIF	!=
AND	&&
OR	
NOT	not
LT-S	lt
GT-S	gt
LE-S	le
GE-S	ge
EQ-S	eq
NE-S	ne

	_
Lexical units	regular expressions
EQUAL	=
DOT	
SEMICOLON	;
COMA	,
OPEN-PAR	(
CLOSE-PAR	)
OPEN-BRAC	{
CLOSE-BRAC	}
OPEN-COND	IF
CLOSE-COND	ELSE
ADD-COND	ELSE IF
NEG-COND	UNLESS
RET	return
FUNCT-DEF	SUB
ID	STRING
FUNCT-NAME	&.STRING
PERL-DEF	defined
PERL-INT	int
PERL-LENG	length
PERL-SCAL	scalar
PERL-SUBS	substr
PERL-PRIN	print
COMM	#.STRING
VARIABLE	\$.STRING

coma peut définir l'opérateur coma ou juste un coma entre deux param, mais même lexical unit, c'est le parser qui se charge du reste

COMM ne sera plus utilisé par la suite, on les supprime avant de faire l'analyse lexicale

# Automates

Définition des automates finis

#### **DFA**

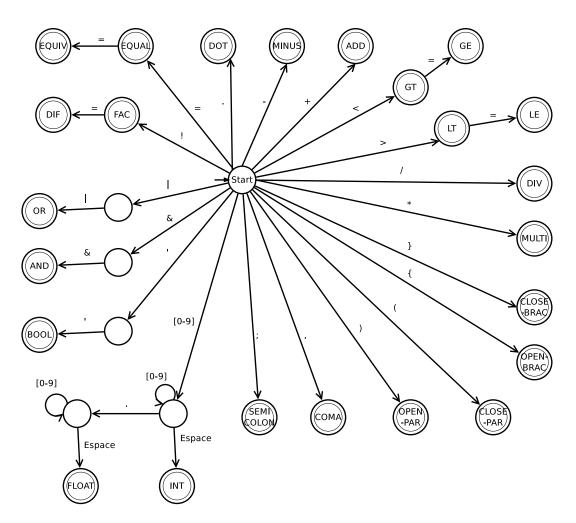

Figure 1: automate "non alphabétique"

La plupart des noeuds pointent vers le token ID, trop lourd a représenter, donc met une petite fleche bleu à la place.

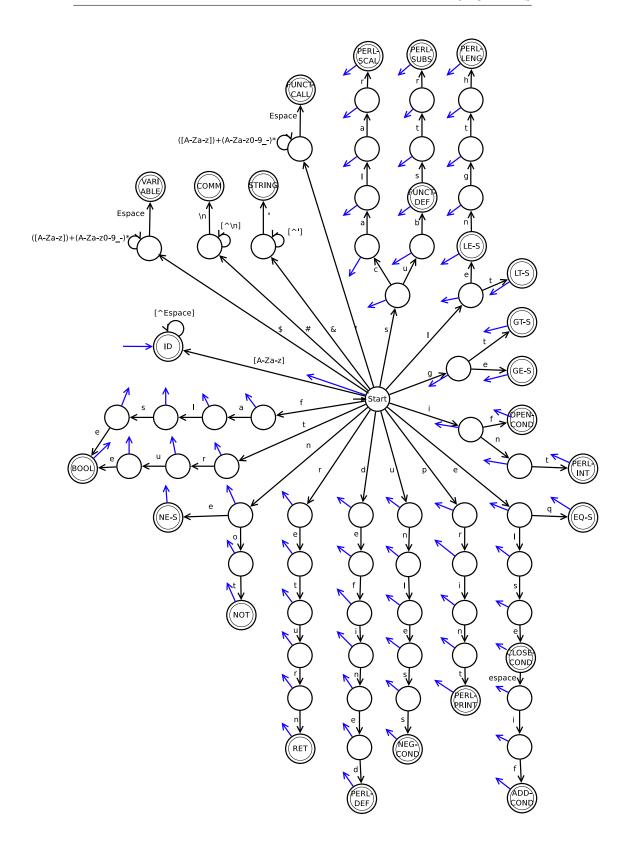

Figure 2: automate "alphabétique"

### Grammaire

#### 3.1 Grammaire de base

Nous utilisons pour définir la grammaire la version simplifiée de l'assistant :

```
<PROGRAM>
                             \rightarrow <FUNCT-LIST> <INSTRUCT-LIST>
                              \rightarrow <FUNCT-LIST>
                              \rightarrow <INSTRUCT-LIST>
       <FUNCT-LIST>
                             \rightarrow <FUNCT>
                             \rightarrow <FUNCT-LIST> <FUNCT>
             <FUNCT>
                             \rightarrow funct-def id <FUNCT-ARG> open-brac <INSTRUCT-LIST> close-brac
       <FUNCT-ARG>
                             \rightarrow <ARG-LIST>
          <ARG-LIST>
                             \rightarrow <ARG-LIST> coma variable
                             \rightarrow variable
                              \rightarrow epsilon
   <INSTRUCT-LIST>
                             \rightarrow <INSTRUCT-LIST> <INSTRUCT> semicolon
                             \rightarrow <INSTRUCT> semicolon
      <FUNCT-CALL>
                             \rightarrow funct-name <FUNCT-CALL-ARG>
<FUNCT-CALL-ARG>
                             \rightarrow <FUNCT-CALL-ARG> coma <EXP>
                             \rightarrow <EXP>
                             \rightarrow epsilon
         <INSTRUCT>
                             \rightarrow variable equal \langle EXP \rangle
                              \rightarrow <EXP>
                              \rightarrow ret \langleEXP\rangle
                             \rightarrow <COND>
               <COND>
                             \rightarrowopen-cond <<br/>EXP> open-brac <<br/>INSTRUCT-LIST> close-brac <<br/>COND-END>
                             \rightarrowadd-cond <<br/>EXP> open-brac <<br/>INSTRUCT-LIST> close-brac <<br/>COND-END>
         <COND-END>
                              \rightarrow close-cond open-brac <INSTRUCT-LIST> close-brac
                             \rightarrow epsilon
       <SIMPLE-EXP>
                             \rightarrow int
                             \rightarrow <FUNCT-CALL>
                             \rightarrow variable
                             \rightarrow string
                 <EXP>
                             \rightarrow <SIMPLE-EXP>
                             \rightarrow open-par \langle EXP \rangle close-par
                              \rightarrow <EXP> add <EXP>
                              \rightarrow <EXP> minus <EXP>
                              \rightarrow <EXP> multi <EXP>
                              \rightarrow <EXP> div <EXP>
                              \rightarrow <EXP> equiv <EXP>
                              \rightarrow <EXP> gt <EXP>
```

#### 3.2 Suppression des symboles inutiles

on vire les non-productifs et inaccessibles. Y en a pas donc ca va vite.

#### 3.3 Gestion des priorités et associativité

Cela ne concerne que la règle EXP, on la transforme donc en :

```
 \begin{array}{ll} \langle \mathrm{EXP} \rangle & \rightarrow \langle \mathrm{EXP} \rangle \ \mathrm{equiv} \ \langle \mathrm{EXP-2} \rangle \\ & \rightarrow \langle \mathrm{EXP} \rangle \ \mathrm{gt} \ \langle \mathrm{EXP-2} \rangle \\ & \rightarrow \langle \mathrm{EXP-2} \rangle \\ \langle \mathrm{EXP-2} \rangle & \rightarrow \langle \mathrm{EXP-2} \rangle \ \mathrm{add} \ \langle \mathrm{EXP-3} \rangle \\ & \rightarrow \langle \mathrm{EXP-2} \rangle \ \mathrm{minus} \ \langle \mathrm{EXP-3} \rangle \\ & \rightarrow \langle \mathrm{EXP-3} \rangle \\ \langle \mathrm{EXP-3} \rangle & \rightarrow \langle \mathrm{EXP-3} \rangle \ \mathrm{mul} \ \langle \mathrm{SIMPLE-EXP} \rangle \\ & \rightarrow \langle \mathrm{SIMPLE-EXP} \rangle \\ & \rightarrow \langle \mathrm{SIMPLE-EXP} \rangle \\ \end{array}
```

#### 3.4 left factoring

Cela ne concerne que EXP, EXP-2, EXP-3 et PROGRAM :

```
<PROGRAM>
                    \rightarrow <FUNCT-LIST> <PROG-TAIL>
                     \rightarrow <INSTRUCT-LIST>
<PROG-TAIL>
                    \rightarrow <INSTRUCT-LIST>
                     \rightarrow epsilon
         \langle \text{EXP} \rangle
                    \rightarrow <EXP-2> <EXP-TAIL>
 <EXP-TAIL>
                    \rightarrow equiv \langleEXP-2\rangle \langleEXP-TAIL\rangle
                     \rightarrow gt <EXP-2> <EXP-TAIL>
                     \rightarrow epsilon
      <EXP-2>
                    \rightarrow <EXP-3> <EXP-2-TAIL>
<EXP-2-TAIL>
                    \rightarrow add <EXP-3> <EXP-2-TAIL>
                     \rightarrow minus <EXP-3> <EXP-2-TAIL>
                     \rightarrow epsilon
                    \rightarrow <SIMPLE-EXP> <EXP-3-TAIL>
      \langle EXP-3 \rangle
<EXP-3-TAIL>
                     \rightarrow mul <SIMPLE-EXP> <EXP-3-TAIL>
                     \rightarrow div <SIMPLE-EXP> <EXP-3-TAIL>
                     \rightarrow epsilon
```

#### 3.5 Left recursion

 ${\bf concerne} \ {\bf FUNCT\text{-}LIST}, \ {\bf ARG\text{-}LIST}, \ {\bf INSTRUCT\text{-}LIST}, \ {\bf FUNCT\text{-}CALL\text{-}ARG}:$ 

```
\langle FUNCT\text{-}LIST \rangle \rightarrow \langle FUNCT\text{-}LIST\text{-}BEG \rangle \langle FUNCT\text{-}LIST\text{-}END \rangle
       \langle \text{FUNCT-LIST-BEG} \rangle \rightarrow \langle \text{FUNCT} \rangle
                                   \rightarrow <FUNCT> <FUNCT-LIST-END>
       <FUNCT-LIST-END>
                                     \rightarrow EPSILON
                 <ARG-LIST>
                                    \rightarrow <ARG-LIST-BEG> <ARG-LIST-END>
           <ARG-LIST-BEG>
                                    \rightarrow variable
                                     \rightarrow epsilon
           <ARG-LIST-END>
                                    \rightarrowcoma variable <ARG-LIST-END>
                                     \rightarrow epsilon
          <INSTRUCT-LIST>
                                     \rightarrow <INSTRUCT> semicolon <INSTRUCT-LIST>
                                     \rightarrow epsilon
      <FUNCT-CALL-ARG>
                                   \rightarrow <FUNCT-CALL-ARG-BEG> <FUNCT-CALL-ARG-END>
<FUNCT-CALL-ARG-BEG>
                                    \rightarrow <EXP>
                                     \rightarrow epsilon
<FUNCT-CALL-ARG-END>
                                    \rightarrow coma <EXP> <FUNCT-CALL-ARG-END>
                                     \rightarrow epsilon
```

#### 3.6 Suppresion des productions unitaires

La règle FUNCT-ARG (< FUNCT-ARG>  $\to$  < ARG-LIST>) est dans ce cas On la remplace donc directement par ARG-LIST.

Seul FUNCT est touché et devient : (<FUNCT>  $\to$  funct-def id <FUNCT-ARG> open-brac <INSTRUCT-LIST> close-brac)

#### 3.7 Suppression des ambiguïté

Il reste encore une ambiguïté avec cette grammaire, au niveau de FUNCT-CALL-ARG :

Soit:

```
 < FUNCT-CALL> \qquad \rightarrow funct-name < FUNCT-CALL-ARG> \\ < FUNCT-CALL-ARG> \qquad \rightarrow < FUNCT-CALL-ARG-BEG> < FUNCT-CALL-ARG-END> \\ < FUNCT-CALL-ARG-BEG> \qquad \rightarrow < EXP> \\ \rightarrow epsilon \\ < FUNCT-CALL-ARG-END> \qquad \rightarrow coma < EXP> < FUNCT-CALL-ARG-END> \\ \rightarrow epsilon \\ \vdots \\ < SIMPLE-EXP> \qquad \rightarrow < FUNCT-CALL> \\ \vdots \\ < EXP> \qquad \rightarrow < SIMPLE-EXP> \\ \vdots \\ < EXP> \qquad \vdots
```

On voit qu'on a un problème car les fonction peuvent appeler des fonctions en paramètres.

On peut ainsi se retrouver avec une fonction du type :

Il est alors impossible de savoir si 3 est le deuxième argument de bar ou de foo. On rajoute alors des parenthèses pour lever cette ambiguïté.

voir si on peut faire ça, on si existe un moyen de résoudre ça en modifiant la grammaire

#### 3.8 Grammaire finale

```
<PROGRAM>
                                    \rightarrow <\!\!\text{FUNCT-LIST}\!\!> <\!\!\text{PROG-TAIL}\!\!>
                                    \rightarrow <INSTRUCT-LIST>
               <PROG-TAIL>
                                   \rightarrow <INSTRUCT-LIST>
                                    \rightarrow epsilon
              <FUNCT-LIST>
                                    \rightarrow <FUNCT-LIST-BEG> <FUNCT-LIST-END>
       <FUNCT-LIST-BEG>
                                    \rightarrow <FUNCT>
       <FUNCT-LIST-END>
                                    \rightarrow <FUNCT> <FUNCT-LIST-END>
                                    \rightarrow epsilon
                    <FUNCT>
                                   \rightarrow funct-def id <ARG-LIST> open-brac <INSTRUCT-LIST> close-brac
                 <ARG-LIST>
                                   \rightarrow <ARG-LIST-BEG> <ARG-LIST-END>
           <ARG-LIST-BEG>
                                   \rightarrow variable
                                    \rightarrow epsilon
           <ARG-LIST-END>
                                    \rightarrow coma variable <ARG-LIST-END>
                                    \rightarrow epsilon
         <INSTRUCT-LIST>
                                    \rightarrow <INSTRUCT> semicolon <INSTRUCT-LIST>
                                    \rightarrow epsilon
                                    \rightarrow funct-name open-par <FUNCT-CALL-ARG> close-par
            <FUNCT-CALL>
      <FUNCT-CALL-ARG>
                                   \rightarrow <FUNCT-CALL-ARG-BEG> <FUNCT-CALL-ARG-END>
<FUNCT-CALL-ARG-BEG>
                                   \rightarrow <EXP>
                                    \rightarrow epsilon
<FUNCT-CALL-ARG-END>
                                    \rightarrow coma <EXP> <FUNCT-CALL-ARG-END>
                                    \rightarrow epsilon
                <INSTRUCT>
                                   \rightarrow variable equal \langle EXP \rangle
                                    \rightarrow ret \langleEXP\rangle
                                    \rightarrow <COND>
                                   → open-cond <EXP> open-brac <INSTRUCT-LIST> close-brac <COND-END>
                      <COND>
                                    \rightarrow close-cond open-brac <
INSTRUCT-LIST> close-brac
               <COND-END>
                                    \rightarrow add-cond <EXP> open-brac <INSTRUCT-LIST> close-brac <COND-END>
                                    \rightarrow epsilon
             <SIMPLE-EXP>
                                    \rightarrow <FUNCT-CALL>
                                    \rightarrow variable
                                    \rightarrow \mathrm{int}
                                    \rightarrow string
                                    \rightarrow open-par <EXP> close-par
                        \langle \text{EXP} \rangle
                                   \rightarrow <EXP-2> <EXP-TAIL>
                 <EXP-TAIL>
                                    \rightarrow equiv <EXP-2> <EXP-TAIL>
                                    \rightarrow gt <EXP-2> <EXP-TAIL>
                                    \rightarrow epsilon
                      \langle \text{EXP-2} \rangle
                                   \rightarrow <EXP-3> <EXP-2-TAIL>
               <EXP-2-TAIL>
                                   \rightarrow add \langleEXP-3\rangle \langleEXP-2-TAIL\rangle
                                    \rightarrow minus <EXP-3> <EXP-2-TAIL>
                                    \rightarrow epsilon
                      \langle \text{EXP-3} \rangle

```

 $\rightarrow$  OPEN-PAR EXP CLOSE-PAR

#### 6.2 Gestion des priorités

On doit adapter la grammaire pour respecter les priorité et les associativité gauche/droite.

Cela ne modifie que les règles EXP, EXP-COND, OPERATOR et OPERATOR-COND qui deviennent :

```
\langle EXP \rangle
             \rightarrow <EXP> LT <EXP2>
             \rightarrow <EXP> LT-S <EXP2>
             \rightarrow <EXP> GT <EXP2>
             \rightarrow <EXP> GT-S <EXP2>
             \rightarrow <EXP> LE <EXP2>
             \rightarrow <EXP> LE-S <EXP2>
             \rightarrow <EXP> GE <EXP2>
             \rightarrow <EXP> GE-S <EXP2>
             \rightarrow <EXP> EQUIV <EXP2>
             \rightarrow <EXP> EQ-S <EXP2>
             \rightarrow <EXP> NE-S <EXP2>
             \rightarrow <EXP> DIF <EXP2>
             \rightarrow <EXP> DOT <EXP2>
             \rightarrow <EXP> COMA <EXP2>
             \rightarrow <EXP2> EQUAL <EXP>
             \rightarrow NOT <EXP>
             \rightarrow FAC <EXP>
             \rightarrow <EXP2>
\langle \text{EXP2} \rangle
            \rightarrow <EXP> ADD <EXP3>
             \rightarrow <EXP> MINUS <EXP3>
             \rightarrow <EXP> OR <EXP3>
             \rightarrow <EXP3>
<EXP3>
             \rightarrow <EXP> MUL <VAR>
             \rightarrow <EXP> DIV <VAR>
             \rightarrow <EXP> AND <VAR>
             \rightarrow <VAR>
```

### 6.3 Suppression des symboles inutiles

On doit virer non-productifs et inaccessibles. Ici ok, rien à faire

#### 6.4 left-factoring

On vire ce qui commence pareillement

On obtient la gram suivante :

 $PROGRAM \rightarrow PROGRAM PROG-END$ 

 $\begin{array}{l} \rightarrow \text{FUNCT-LIST} \\ \rightarrow \text{INSTRUCT} \end{array}$ 

 $\rightarrow$  EPSILON

 $\begin{array}{ccc} \mathsf{PROG\text{-}END} & \to \mathsf{FUNCT\text{-}LIST} \end{array}$
